

PROJECT OVERVIEW

The Sandstone Creek Solar Project is a 65 megawatt (MW) solar project located in Eaton County, Michigan in Benton Township. The project will help Michigan achieve its Renewable Portfolio Standard of 15% of electric load by 2021 and will help retain the rural aspect of the local community throughout its operational years.

Sandstone Creek will span approximately 550 acres and will connect at the Oneida substation. The project is anticipated to positively impact both the environment and the local economy by producing significant tax revenue and reducing carbon dioxide emissions by 78,000 metric tons each year - the equivalent of taking 12,000 cars off the road every year. Sandstone Creek will be a good neighbor by helping to reduce storm water run-off and improve overall local water quality. The project will have a low profile and will be odorless and noiseless.

ABOUT GERONIMO ENERGY

Geronimo Energy is a full-service renewable energy company headquartered in Minneapolis, Minnesota. Geronimo has developed over 2,000 megawatts of wind and solar projects that are either operational or currently under construction throughout the United States. Geronimo has a multi-gigawatt development pipeline of wind and solar projects in various stages of development throughout the United States. Geronimo provides custom solutions for utilities and corporations looking to harness renewable energy for business growth. With deep roots in agriculture, Geronimo prides itself on developing wind and solar projects that are farmer-friendly, community-driven, and beneficial for rural communities.

PROJECT SPECIFICATIONS

Operational Capacity: 65 MW

Location: Eaton County, Michigan

Capital Investment: ~\$96 million

Construction Timeline: 2020

Expected COD: December 31, 2020

Carbon Dioxide Emissions Reduced: 78,000 metric tons annually

*Calculations based on 2018 National Renewable Energy Laboratory (NREL) JEDI Model and proposed Michigan tax for solar facilities.
